

45 bin och en humla i riskzonen

Livskraftig (inte på rödlistan) LC: 192 (+/- endring sen 2015)

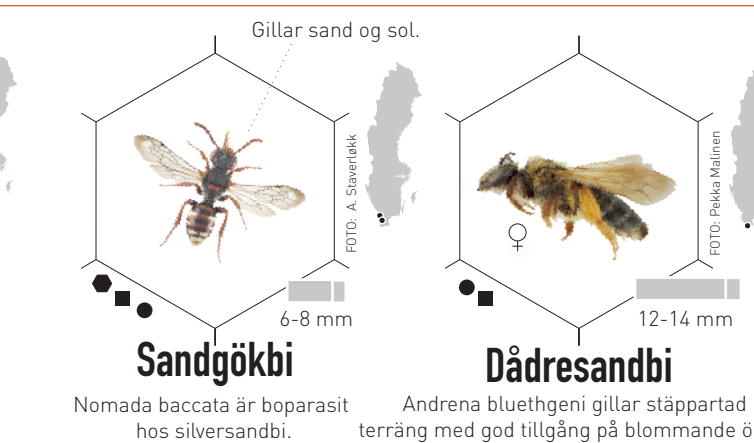

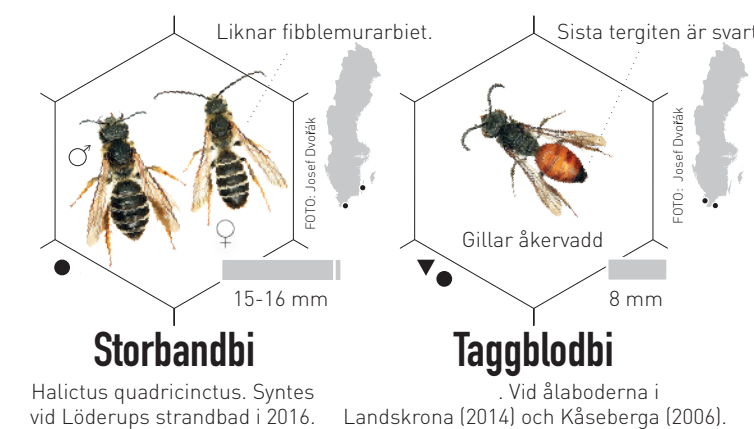

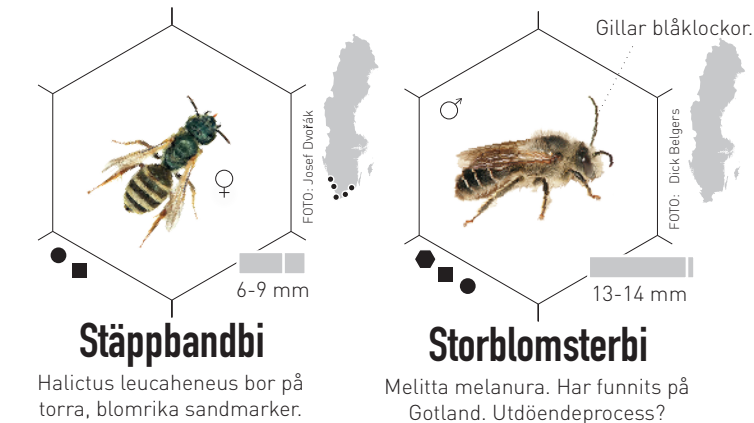

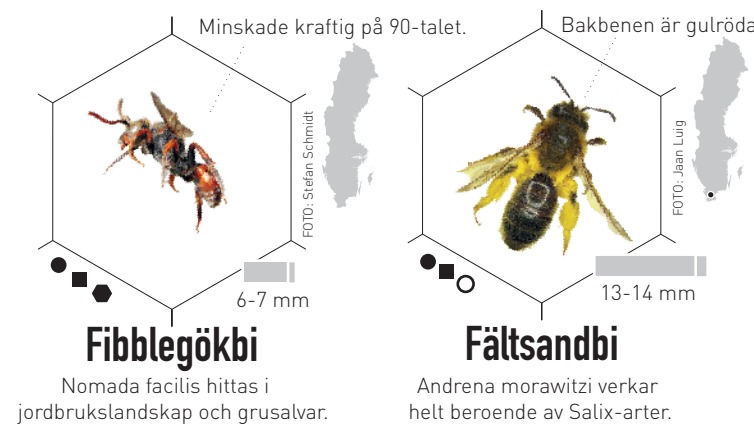

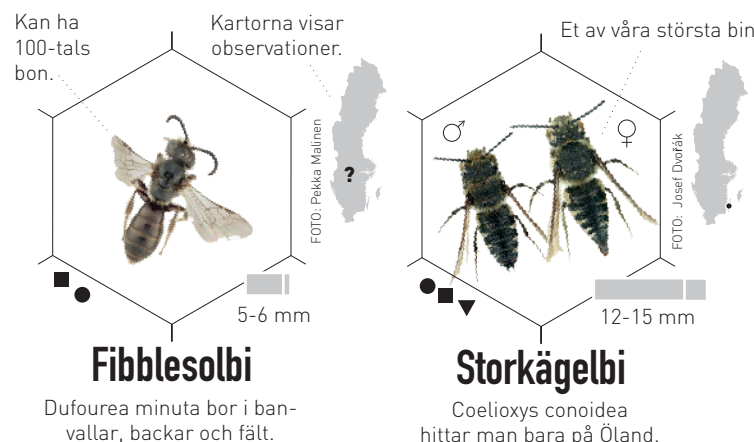

22 april kom den nya rödlistan, den visar vilka arter som är utrotning-shotade. Antalet bin och humlor på listan gick lite ned. 1/3-del av alla vildbin är fortfarande hotade. Ser du någon så kontakta artfakta.se

Rödlistan

Den nationella rödlista görs vart femte år och är en sammanställning av arters status och trender inom ett lands gränser. Arterna bedöms med hjälp av ett antal kriterier, som omfattar skattningar av populationsstorlek, förekomst, utbredning och populationstrender. Utifrån denna bedömning placeras arterna i olika kategorier. Källa: SLU

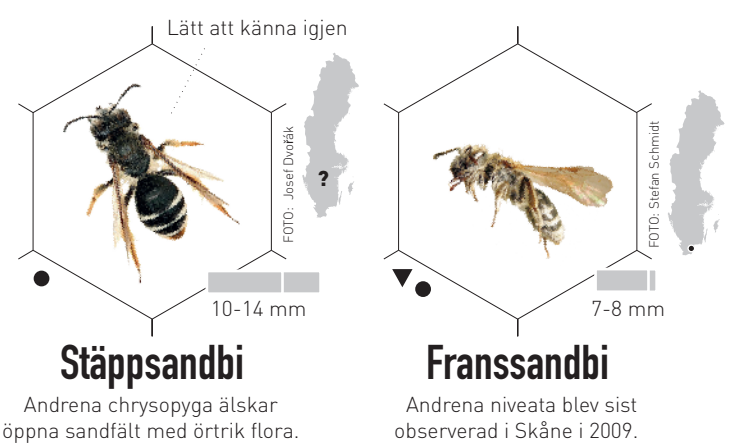

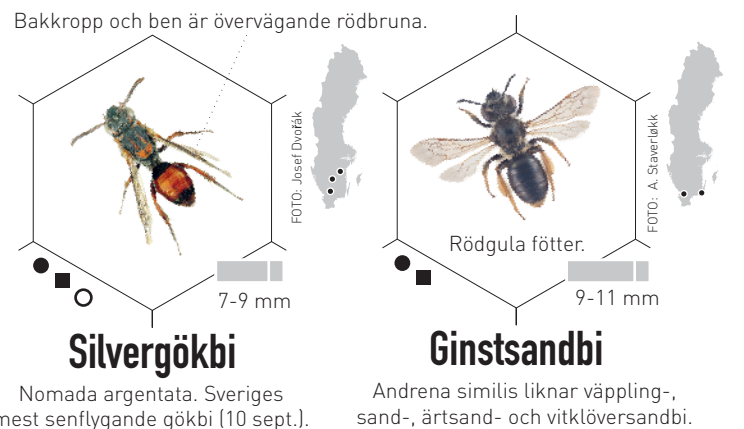

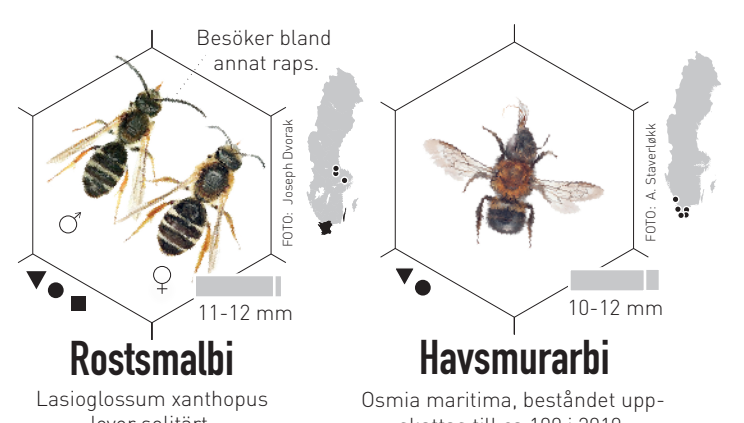

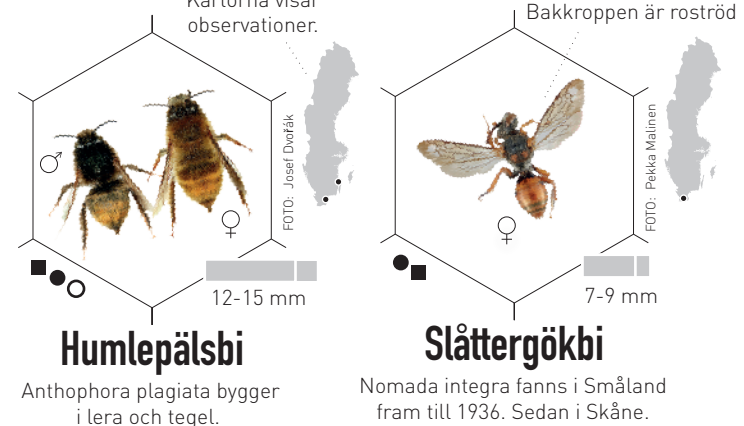

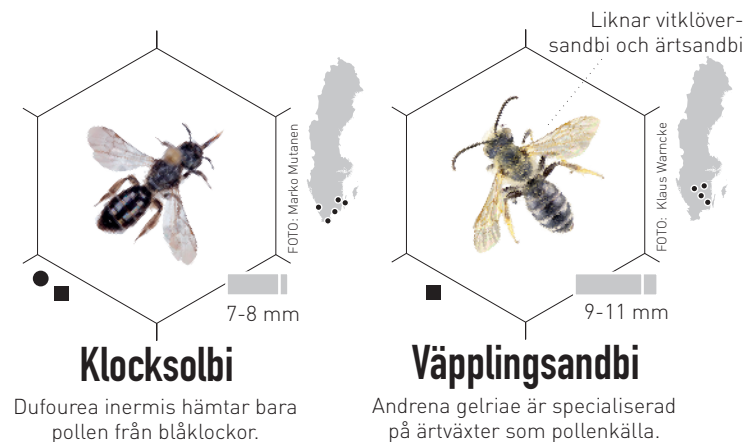

8 akut hotade vildbin

Det är åtta **akut hotade** bin i Sverige i 2020, samma som i 2015.

13 starkt hotade vildbin

Det är tretton **starkt hotade** i 2020, som i 2015.

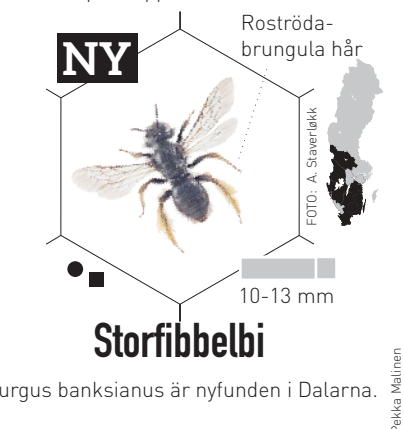

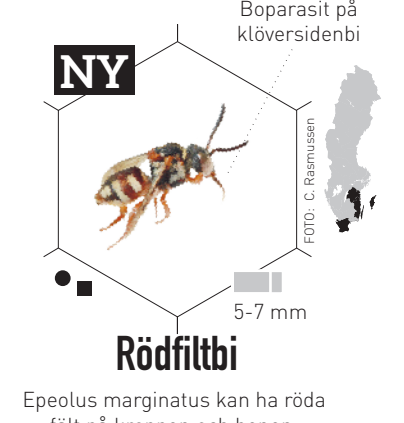

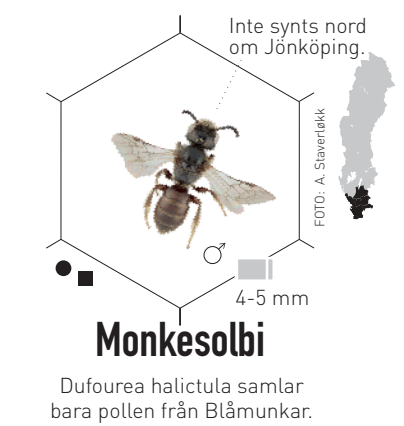

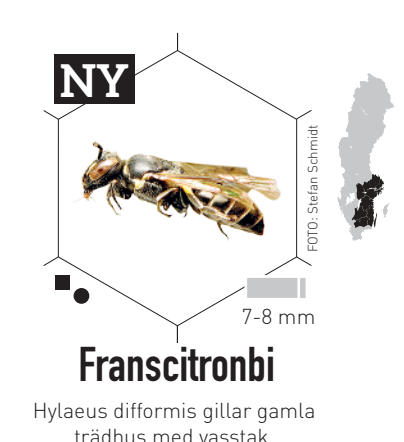

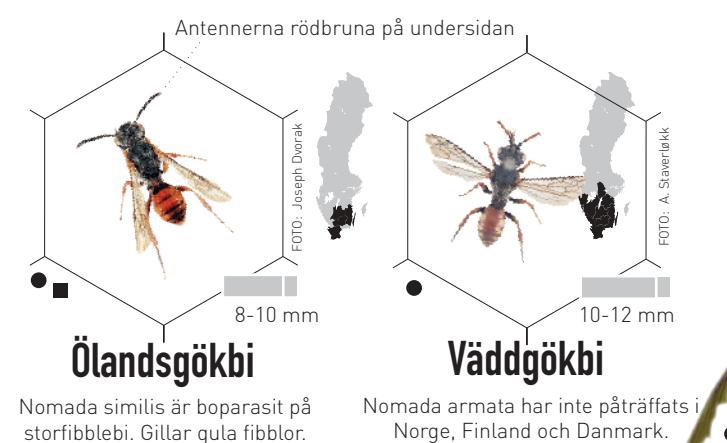

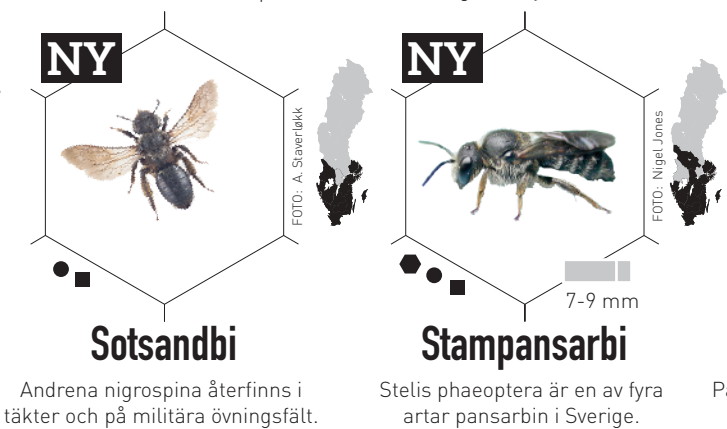

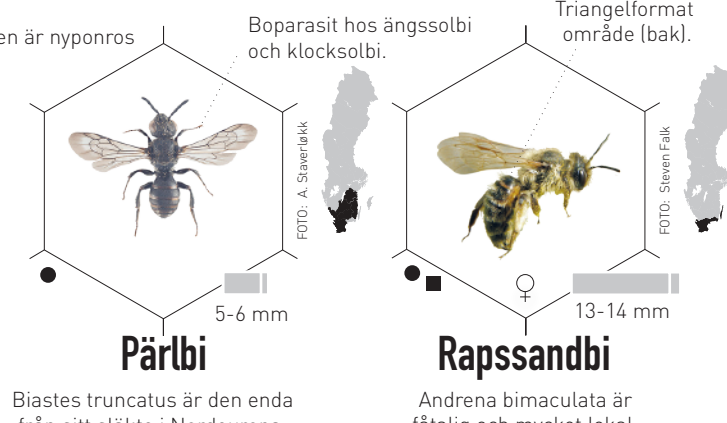

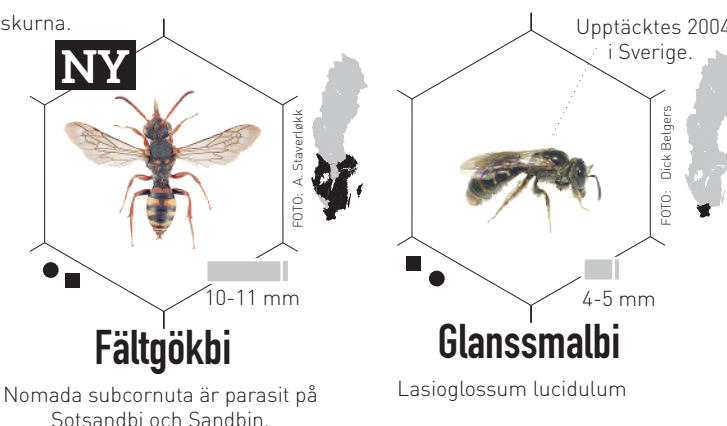

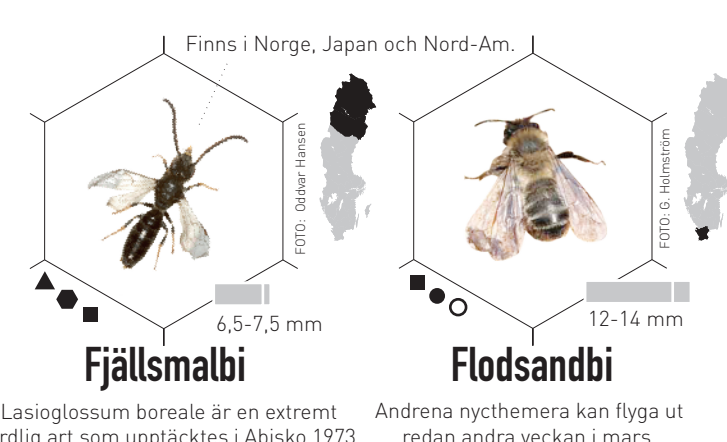

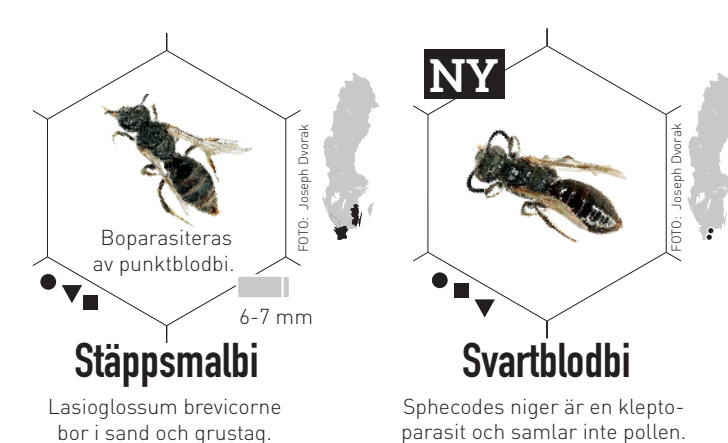

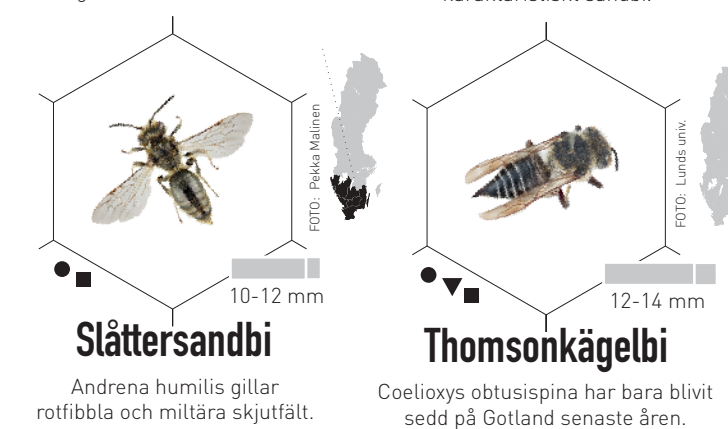

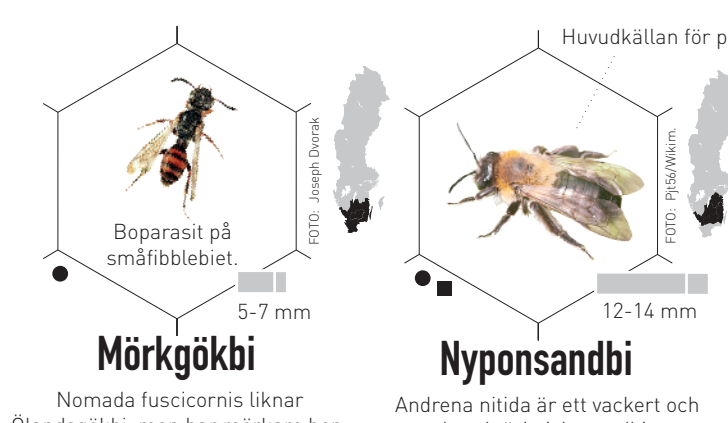

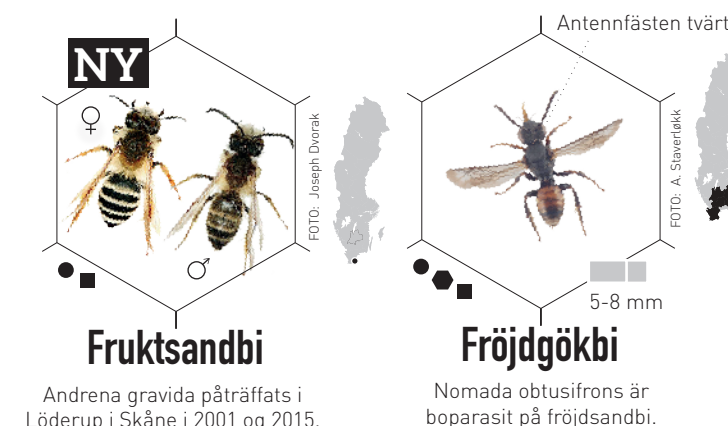

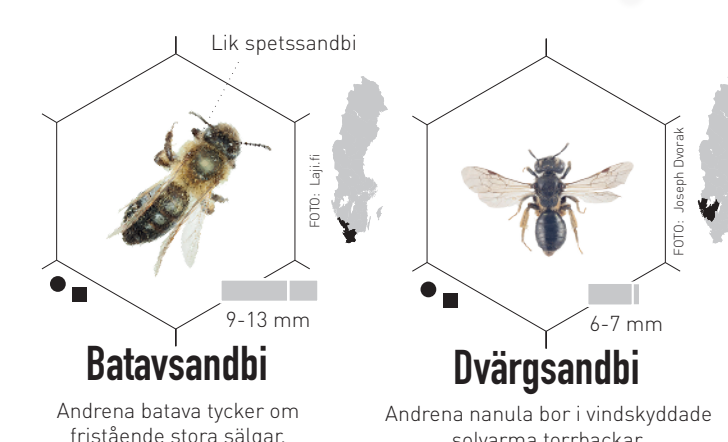

24 sårbara vildbin och en sårbar humla

■ Helfärgad landskap = iakttagen över tio gonger

♀ = Hona ♂ = Hane

Här lever bina: ● Jordbruk ■ Urbant ▼ Havsstrand Skog ▲ Fjäll ○ Våtmark

16-19 mm
